

Collect and Select your favourite audio and video content anytime, anywhere

omniyon is a truly uniform entertainment experience. With its content management system and the multi-property synchronisation function, your media collection including all cover art, selected languages and other information will be available at all of your preferred locations, both on and offshore. Content, quality and control remain consistent regardless of whether you are on board of your yacht, private jet or at home.

The uniform and attractive graphical user interface provides easy and intuitive access to all of your Movies, Music, Radio channels, TV Channels, TV series and iTunes content (music only) in your preferred language. Subtitles and language options are not limited to the content only but are also selectable for the entire control menu ensuring the language of your interface is compatible to your needs. Available options include English and Russian in Cyrillic script with other languages on request.

Omniyon is compatible with multiple media formats and sources. Full HD, 3D and 4K ensures uniform and high quality audio and video. Featuring the same user interface throughout all rooms, areas and locations on any Tablet available, ensures the highest usability. The control functionality can be incorporated seamlessly with leading control systems such as Crestron, Savant or AMX (API), or by using the omniyon User Interface App.

All your private data is stored safely and securely on a dedicated server. As soon as any private content is uploaded to the system, from any one of your locations, it is securely stored and can then be played at all connected locations without any need to keep the original CD, DVD, Blu-Ray or USB in the drive. The system is not limited in terms of content or users meaning you can continue to expand your private collection as well as increase the amount of simultaneous users across multiple locations.
